Circle provides an out-of-the-box implementation with Azure AD to complement its SSO's seamless UX with Circle's unparalleled security of cryptographic credential-free authentication
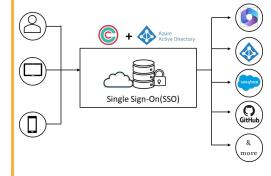

PROBLEM : Traditional SSO solutions act as a single point of failure and are not secure

★ 90% of the data breaches are due to credential compromise
★ SSO's are a must have for current businesses with high ROI
★ 44% of passwords are changed rarely
★ SSO provides full visibility and access to a user across multiple applications
★ Cloud is compromised and Cloud based SSO are a gateway to all cloud services

SOLUTION: Circle for Azure AD is a decentralized cryptographic credential free SSO

★ Eliminate credential based attacks with cryptographic credential-free authentication
★ No single-point of failure with decentralized architecture and zero cloud attack surface
★ Frictionless UX with no compromise to security
★ Additional layer of security with automated password updation system

Single Sign-On(SSO)

Easy to Deploy | Easy to Use | Easy to Support

Out-of-box implementation | Built-in integrations with all Microsoft applications | Available for both Desktop and mobile devices | Seamless integrations with 3rd Party applications | Available for Admins, Developers and Enterprises | Superfast onboarding and offboarding process

Integration partners

Azure Active Directory

ForgeRock® okta auth0

PingIdentity. AWS Cognito SailPoint

Other Security Partnerships

BlackBerry (Endpoint) CloudBees. (DevOps)
